DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-19 and 26, drawn to a composition comprising a virulent or opportunistic prokaryote.

Group II, claim(s) 20-25, drawn to an isolated and purified DNA and vector.

Group III, claim(s) 27-30, drawn to a method of enhancing protective immunity against infection or disease.

Group IV, claim(s) 31-32, drawn to a method of attenuating or reducing the severity of an infection or disease.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The compositions recited in group I can be used with methods other than those recited in groups III or IV. For instance, the composition can be used in a method to express metal ion dependent genes. Therefore, the composition's special technical feature is comprised within the composition and not within the methods; therefore the groups lack the same or corresponding technical feature.

Group II, is drawn to an unrelated invention to group I, III or IV because it use, function and effect are patentably distinct in comparison to the other groups. Group II

Art Unit: 1645

has a different special technical feature when compared to the method claims, or the composition claims because the recited components of the DNA and vector are the special technical features. These special technical features are comprised within their structural differences of the DNA and in the special technical features of the composition or method claims. Accordingly, the groups lack a corresponding technical feature.

Finally, groups III and IV are unrelated and do not share a special technical feature because each method has a separate and distinct purpose with separate and distinct final outcomes. Therefore, there is no corresponding special technical feature between the groups III and IV.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
